UNITEX 800

In the E-commerce business you will be packaging the most diverse products on this versatile and fully automatic line in a custom tailored film bag. This can be done in transparent or in opaque/colored PE-film, however, packaging in PO-film is also possible. Products will be fed to the system randomly intermixed and will be packed in a tight pouch with three strong and reliable weld seams.

The figure may show optional equipment, ordered separately

Technical specifications

		UNITEX 800
Transverse seal bar, length	[mm]	850
Longitudinal seal bar, length	[mm]	850

Label printer for shipping address labels.

Your benefits highlighted

- Easy and economical packaging of a wide range of products
- Simplest operating of the UNITEX, even by semi-skilled personnel
- Less volume of film pouches allows for more products per shipment and thus provides for better carbon footprint
- No conveyor necessary for the disposal of cardboards and other packaging materials of returning merchandise
- Reduced storage cost for filmpackaging materials combined with more flexibility

Solutions based on Kalfass quality. Competence in production of a wide range of packaging machines, from customer tailored systems to packaging systems for integration into production lines.
